MPP 1000C Modem

The 1000C Modem incorporates the latest state-of-the-art technology and is designed to enhance the use of your Atari computer. The 1000C is a complete telecommunications package, ready to plug in and to use. All you need is your Atari computer; other equipment is optional.

The 1000C Modem provides an auto answer/auto dial capability along with a direct connection into modular telephone jacks. The modem includes "Smart Terminal" software...just plug the cartridge into your computer and you are ready to communicate. The software supports disk drives, cassette recorders, and printers.

The "Smart Terminal" is completely menu-driven, changing an option is as simple as typing a single key. Nine dynamic buffers allow full uploading and downloading capabilities. You can use the "Smart Terminal's" built-in text editor to prepare text and messages while off-line; helping save on-line telephone charges.

Features not available with conventional Atari modems include direct disk and printer data transfer. The disk option allows direct transfer of data to and from the modem without being buffered. This permits files larger than available memory to be transferred. The direct printer option prints incoming data as it is received. This makes it easy to have a hard copy of an entire terminal session.

The MPP 1000C Modem is compatible with the MPP 1150 Printer Interface. You can pair the modem and printer interface to have a complete system that takes advantage of the many features of your Atari computer.
